Professional Summary

Cybersecurity student with hands-on experience in **Pentesting**, vulnerability analysis, and system security. I completed an internship where I worked on real-time security testing and improved my practical skills. I actively learn and practice on **Try Hack Me**, focusing on offensive and defensive security. I can create clear and detailed **security reports**, and I also write cybersecurity blogs on Blogspot. I run a small startup called **Ignite The Star**, and I am passionate about learning, growing, and developing new ideas in the field of cybersecurity.

Skills

- **Skills :** Public speaker | Networking | Project Management | Technical Blogging | DSA | DBMS |
- **Programming :** JAVA | C | Python | HTML | MYSQL | API |
- **Tools :** Offensive Tools | OWASP | Linux | Network Analysis | Windows Programming | GITHUB

Experience

Cybersecurity Project Intern — **Hebesec** | Remote — **03/2025 – 04/2025**

- Gained hands-on experience with Linux command usage, security tools, and report writing while actively practicing labs and challenges on Try Hack Me.

Cyber Forensics &OSINT contribution — **Cybersecnexus** Remote — **07/2025 - 08/2025**

- Completed an internship focusing on penetration testing, application security, cyber forensics, and real-time vulnerability analysis, strengthening my practical cybersecurity skills.

Digital Forensic Intern — **Young Cyber Knights Foundation** Remote — **08/2025 - 11/2025**

- Assisted in digital evidence collection, analysis, and reporting, while working on penetration testing, application security, and real-time vulnerability assessments.

Projects

GEOFENCING-TEAM — 10/2024-11/2024

Tools : C, Python, Git, Arduino ,HTML,SEASHARP - Designed and built a geofencing system that tracks students both **online and offline**, allowing seamless monitoring even without internet connectivity .Integrated **location boundary detection** to trigger instant alerts when a student enters or exits predefined safe zones.Implemented **secure data logging** to store movement history, ensuring reliable records for audits and safety verification.

OBJECT DETECTION- *Individual* — 1/2025

Tools : Python,Thonny - I developed an advanced object detection-based online examination monitoring system designed to track students' live activities throughout the exam. The system uses encrypted hash-key facial data for secure identity verification and includes a specialized iris-based module to accurately differentiate twins. It continuously analyzes behavior, detects suspicious movements or unauthorized objects, and maintains strict data privacy through secure encryption and controlled access.

PRESCRIPTION TRANSLATOR-TEAM — 11/2025

Tools : Python ,Html, Css, JSON, MONGODB, Hugging face - Handled accurate transcription of audio/video content and translated it into clear, context-correct text across multiple languages. Delivered high-quality, error-free output with strong attention to detail, maintaining tone, meaning, and cultural accuracy throughout the process.

GREEN CORRIDOR TRAFFIC SIGNALLING SYSTEM -TEAM — 1/2026

Tools: Python, Embedded C, Yolo-Designed a real-time green corridor traffic system using video analytics to prioritize emergency vehicle.

Education

Bachelor of Engineering — SSM INSTITUTE OF ENGINEERING AND TECHNOLOGY — Dindigul, TamilNadu,IN — **2023 - current**

- Major in Computer Science Engineering (cybersecurity) — **CGPA** : 8.29 upto 5th semester

Awards

- **Ethical Hackhive:** Secured First Prize in *HackHive*, a cybersecurity competition conducted by KPRIET (11/2024)
- **Samadhaan:** Won Second Prize in the *Samadhaan Poetry Competition* for creative impactful presentation. (06/2024)
- **TANCAM**: Selected as a Finalist in *TANCAM*, standing out among 800 student participants for innovation and technical excellence.04/2025)

Courses and certification's

• Tech Mahindra Cybersecurity • Cisco Ethical Hacking • Security blue team • E3L• Cisco Networking Basics
